**Explanation of Chart:**  
Altitude Disc Golf uses the Innova flight ratings system. This chart doesn't show the exact flight path of each disc, rather it should be used to compare disc characteristics between brands given that a player throws identically each time. Since a player's throwing style and strength can vary, as well as different manufacturers' plastics can impact the exact flight path, this chart is not exact, but it is designed to aid in the process of choosing a disc.

Here is what Innova has to say about each rating:

**S=Speed** - "Speed is the ability of the disc to cut through the air. Speed Ratings are listed from 1 to 14. Discs with high numbers are faster. Faster discs go farther into the wind with less effort. Slower discs take more power to throw, but have less of a chance to fly past the basket."

**G=Glide** - "Glide describes the disc's ability to maintain loft during flight. Discs with more glide are best for new players, and for producing maximum distance (especially downwind). Glide is rated from 1 to 7. Beginners looking for more distance should choose discs with more glide."

**T=Turn** - "High Speed Turn is the tendency of a disc to turn over or bank to the right (for a RHBH thrower) during the initial part of the flight. A disc with a +1 rating is most resistant to turning over, while a -5 rating will turn the most. Discs rated -2 to -5 make good roller discs."

**F=Fade** - "Low Speed Fade is the disc's tendency to hook left (for a RHBH thrower) at the end of the flight. Fade is rated from 0 to 5. A disc rated 0 will finish straightest, while a disc rated 5 will hook hard at the end of the flight. Discs with a high fade rating are predictable even in wind."

For more information on flight chart ratings and how to choose a disc, please visit these sites:
